Allowable Operating Temperature	−20℃ to 60℃	−20℃ to 60℃

◎: Excellent ○: Very good

- This is a jaw type flexible coupling.
- Tight Fit enables transmission with zero backlash at low torque.
- Easy fit allows you to assemble and partition the hub and sleeve smoothly.
- Excellent flexibility allows eccentricity, angular misalignment and twisting vibration to be accepted.
- It has electrical insulation. Resistance value: Not less than 2 MΩ
- There are four types of sleeve hardness. Please select desirable units according to usage conditions including torque and misalignment.

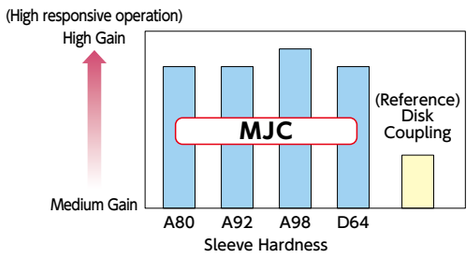
● Sleeve Type

Sleeve Type	Sleeve Hardness (JIS)			
	A80	A92	A98	D64
Tight Fit	BL	WH	RD	GR
Easy Fit	EBL	EWH	ERD	EGR

Small ← Rated Torque / Max. Torque → Large
Large ← Allowable Misalignment → Small

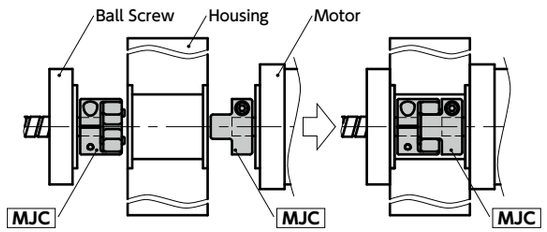
● Tight Fit
The hub and sleeve are press-fit and can be used under zero backlash*1.Since the sleeve's vibration absorption can raise the gain of a servomotor, this unit can achieve high responsive operation exceeding the Disk coupling.

*1 : For the torque used under zero backlash, please refer to dimensional table.



● Tight Fit Applications
XY stage / Index table / Machine tool / Injection molding machine

● Easy Fit
This unit allows you to easily assemble and partition the hub and sleeve. This allows you to reduce the time of assembling the unit and maintenance.It is possible to mount a hub on the shaft in advance and easily assemble the unit even in a location where the coupling is less-visible.

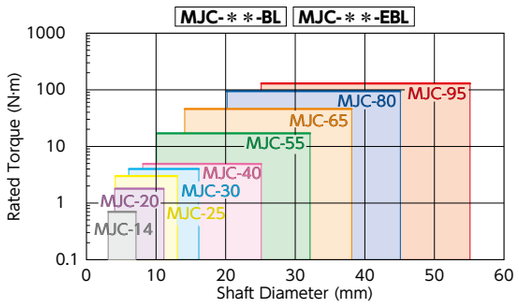


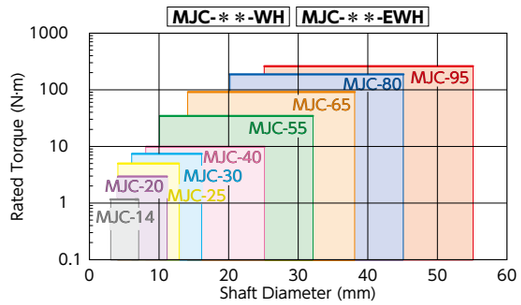
● Easy Fit Applications
Transport device / Mixer / Ventilator / Pump / Dispenser

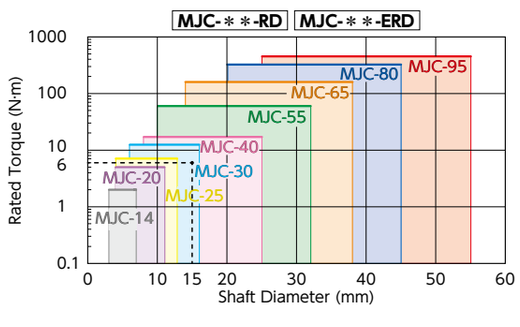
Selection

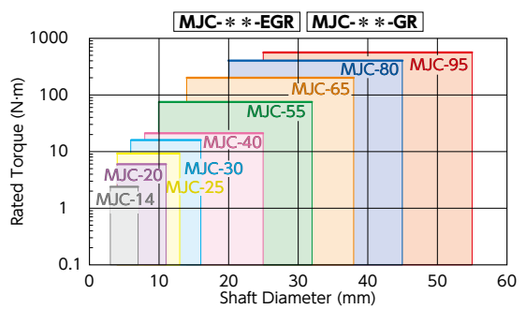
● Selection based on shaft diameter and rated torque

The area bounded by the shaft diameter and rated torque indicates is the selection size.









● Selection Example

In case of selected parameters of shaft diameter of ϕ15 and load torque of 6 N•m, the selected size for **MJC-＊＊-RD**, **MJC-＊＊-ERD** is **MJC-30-RD**, **MJC-30-ERD**.

● Selection based on the rated output of the servomotor

Rated Output (W)	Servomotor Specifications			Selection Outside Diameter Size			
	Diameter of Motor Shaft (mm)	Rated Torque (N・m)	Instantaneous Max. Torque (N・m)	MJC-**-BL MJC-**-EBL	MJC-**-WH MJC-**-EWH	MJC-**-RD MJC-**-ERD	MJC-**-GR MJC-**-EGR
10	5 - 6	0.032	0.096	14	14	14	14
20	5 - 6	0.064	0.19	14	14	14	14
30	5 - 7	0.096	0.29	14	14	14	14
50	6 - 8	0.16	0.48	20	20	20	20
100	8	0.32	0.95	20	20	20	20
200	9 - 14	0.64	1.9	30	30	30	30
400	14	1.3	3.8	30	30	30	30
750	16 - 19	2.4	7.2	–	40	40	40

● Motor specifications are based on general values.For details, see the motor manufacturer's catalogs.This is the size for cases where devices such as reduction gears are not used.

● Selection Example

In case of motor specification of shaft diameter of ϕ14 and rated torque of 0.64 N•m, the selected size of **MJC-＊＊-BL** is as follows.

- Set Screw Type —— **MJC-30-BL**
- Clamping Type —— **MJC-30CS-BL**
- Set Screw + Key Type —— **MJC-30K-BL**
- Clamping + Key Type —— **MJC-30CSK-BL**

- All products are provided with hex socket set screw.
- In a case where the bore diameter are ϕ3,ϕ4 and ϕ 1/8, the setscrew is used in only one place.
- Recommended dimensional allowances of applicable shaft diameter are h6 and h7.
- A set of hubs with set screw type for one side and clamping type or other type for the other side is available upon request.
- For the shaft insertion amount to the coupling, see Mounting/maintenance.

- This is a jaw type flexible coupling.
- It is a short type and more compact than MJC.
- Tight Fit enables transmission with zero backlash at low torque.
- Easy fit allows assembling and separation of hubs.
- Excellent flexibility allows eccentricity, angular misalignment and twisting vibration to be accepted.
- It has electrical insulation. Resistance value: Not less than 2 MΩ

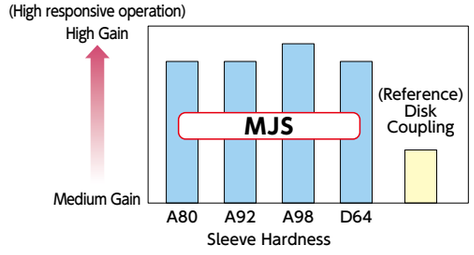
Available / Add'l charge	Please feel free to contact us	Available / Add'l charge

● Tight Fit
The hub and sleeve are press-fit and can be used under zero backlash*1.Since the sleeve's vibration absorption can raise the gain of a servomotor, this unit can achieve high responsive operation exceeding the Disk coupling.

*1: For the torque used under zero backlash, please refer to Performance table.



● Tight Fit Applications
XY stage / Index table / Machine tool / Injection molding machine

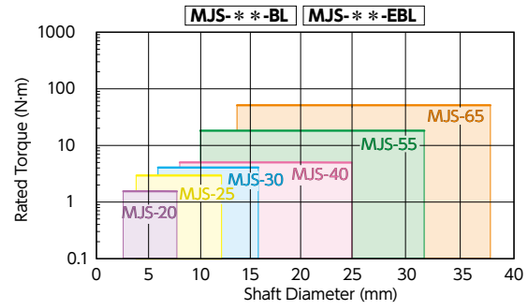
● Easy Fit
This unit allows you to easily assemble and partition the hub and sleeve.
This allows you to reduce the time of assembling the unit and maintenance.
It is possible to mount a hub on the shaft in advance and easily assemble the unit even in a location where the coupling is less-visible.

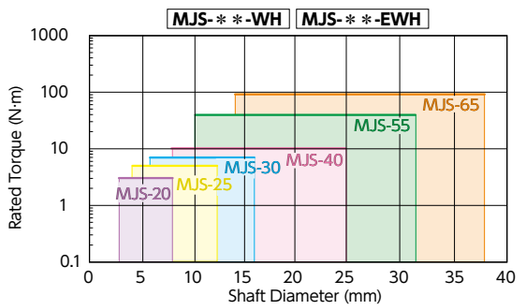
● Easy Fit Applications
Transport device / Mixer / Ventilator / Pump / Dispenser

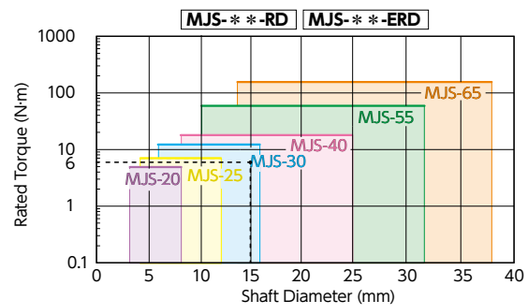
Selection

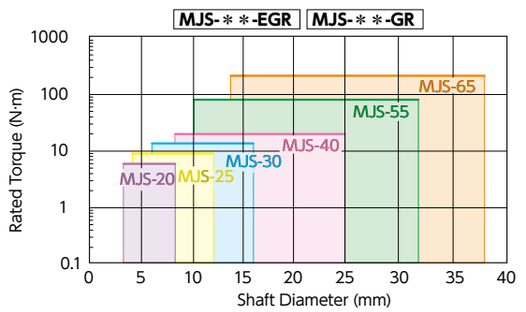
● Selection based on shaft diameter and rated torque

The area bounded by the shaft diameter and rated torque indicates is the selection size.









● Selection Example
In case of selected parameters of shaft diameter of ϕ15 and load torque of 6 N•m, the selected size for MJS-**CS-RD, MJS-**CS-ERD is MJS-30CS-RD, MJS-30CS-ERD.

- All products are provided with hex socket head cap screw.
- Recommended dimensional allowances of applicable shaft diameter are h6 and h7.
- A set of hubs with clamping type for one side and clamping + key type for the other side is available upon request.
- In case of mounting on D-cut shaft, be careful about the position of the D-cut surface of the shaft.
- For the shaft insertion amount to the coupling, see Mounting/maintenance.

Electrical Insulation	◎	◎
Assembling	○	◎
Allowable Operating Temperature	−20℃ to 60℃	−20℃ to 60℃

◎: Excellent ○: Very good

- This is a jaw type flexible coupling.
- Excellent for high torque transmission and ideal for machine tool spindles.
- Excellent flexibility. Excellent flexibility allows eccentricity, angular misalignment and twisting vibration to be accepted.
- It has electrical insulation. Resistance value: Not less than 2 MΩ
- There are four types of sleeve hardness. Please select desirable units according to usage conditions including torque and misalignment.
- Since the sleeve's vibration absorption of Tight Fit can raise the gain of a servomotor, this unit can achieve high responsive operation exceeding the Disk coupling.
- Easy fit allows you to assemble and partition the hub and sleeve smoothly.
  This allows you to reduce the time of assembling the unit and maintenance.

● Application

Machine tool / Spindle

● Sleeve Type

Sleeve type	Sleeve hardness (JIS)			
	A80	A92	A98	D64
Tight fit	BL	WH	RD	GR

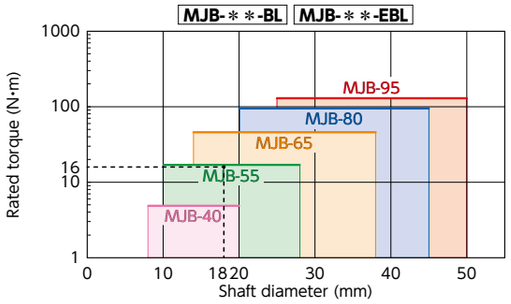
Small ← Rated torque / Max. torque → Large

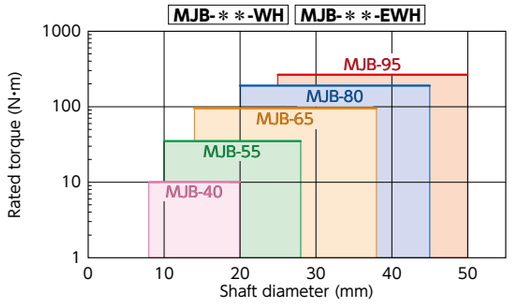
Large ← Allowable misalignment → Small

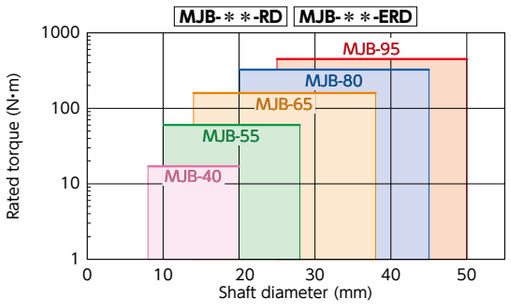
Selection

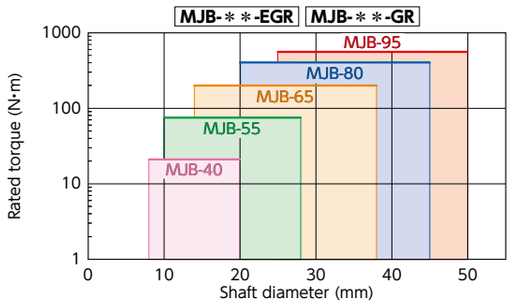
● Selection Based on Shaft Diameter and Rated Torque

The area bounded by the shaft diameter and rated torque indicates the selection size.









● Selection Example

In case of selected parameters of shaft diameter of ϕ 18 and load torque of 16 N•m, the selection size for **MJB-＊＊-BL** **MJB-＊＊-EBL** is **MJB-55-BL** **MJB-55-EBL**

Additional Keyway at Shaft Hole ➡ P.xxxx	Cleanroom Wash & Packaging ➡ P.xxxx	Change to Stainless Steel Screw ➡ P.xxxx
Not Available	Not Available	Not Available

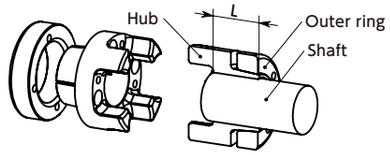
● Mounting and Removing

● Mounting

① Clean up the fitting surfaces of hub, outer ring and shaft.

② Apply light oil thinly on the surfaces. However, avoid molybdenum base oil as it seriously reduces the fastening power.

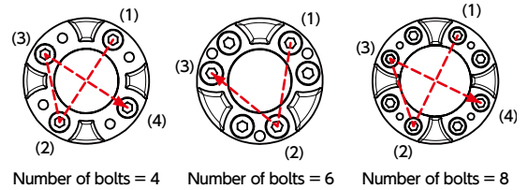
③ Insert the shaft to the dimension L. ➡ **Table 1**



④ Tighten the hex socket head bolts with 50% of the tightening torque in **Table 1**, each once, following the sequence in **Fig. 1**.

⑤ In the same sequence as in ④, tighten the hex socket head bolts with 100% of the tightening torque in **Table 1**, each once.

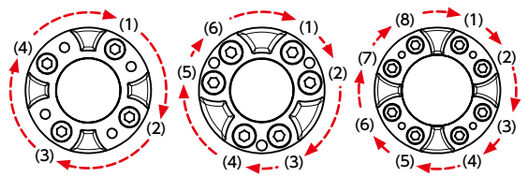
Dia Tighten in diagonal sequence



Number of bolts = 4 | Number of bolts = 6 | Number of bolts = 8

⑥ Tighten all hex socket head cap screws with 100% of the tightening torque in **Table 1**, following the sequence in **Fig. 2**.

Diagram 2 Tighten all bolts



Number of bolts = 4 | Number of bolts = 6 | Number of bolts = 8

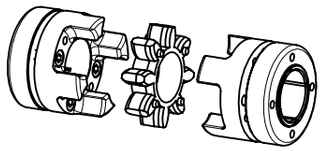
⑦ Repeat ⑥ until all hex socket head cap screws are securely fixed.

As a guide, the rotation of a hex socket head screw, when tightened, should be less than 20 degrees.

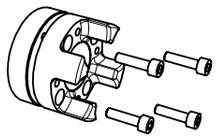
Use a torque wrench to tighten bolts.

● Removal

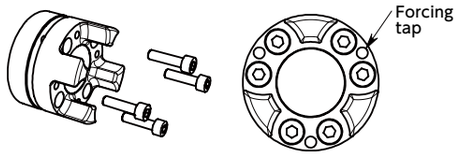
① Disassemble the hub and the sleeve.



② Confirm that there is no torque or thrust load, then loosen all hex socket head bolts completely and remove them.



③ Insert one of the removed bolts in ② to a forcing tap, and tighten little by little, avoiding uneven clamping.



④ Repeating ③ will lead to sharply reduced tightening torque.

Remove the coupling from the shaft, as the fastening force from the tapered surface is reduced.

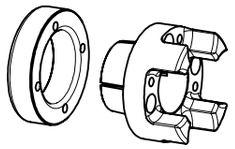


Table 1

Part Number	L	Hex Socket Head Cap Screw		Screw Tightening Torque (N?m)

*1 : Correction of rated torque and max. torque due to load fluctuation is not required. However, if ambient temperature exceeds 30℃, be sure to correct the rated torque and max. torque with temperature correction factor shown in the following table. The allowable operating temperature of MJB is −20℃ to 60℃.
※ The shaft's slip torque may be smaller than the coupling's rated torque depending on the shaft bore. ➡ P.xxxx

*2 : These are values with max. bore diameter.

● Ambient Temperature / Temperature Correction Factor

Ambient Temperature	Temperature Correction Factor
−20℃ to 30℃	1.00
30℃ to 40℃	0.80
40℃ to 60℃	0.70
